Why registration is important?

If you own the boxed (CD) Version\* of Rail Traffic Controller Vol. 1, you might consider registering your version.

You might think: why would I register Post T Arnhem 1965? There are many benefits to it:

- you will be eligible to the extra things we offer to registered customers
- you will be notified of new products before they are announced to the public
- you will be eligible to participate in betatests and/or multiplayer tests. (and they are awesome!)

On the back of the manual you will find your registration code.

Go to:

<http://www.signalsimulation.com/registration>

to register your email address with us!

Thank you very much!

\*note: for those customers that bought Post T Arnhem 1965 directly from our website, no registration is needed! With your purchase your email address is in our customer database already!
